SUMMARY

Senior front-end developer with 18+ years of shipping production web apps, most recently in React and TypeScript. Built for high-traffic streaming, enterprise SaaS, consumer fintech, and live-event platforms — including front-end work on a Sports Emmy-winning FOX Sports feature. Strong focus on UX, accessibility, and performance, and on close collaboration with backend and design teams. Uses Claude Code to speed up development, documentation, and testing, with human review at every step.

TECHNICAL SKILLS

Front-End: React, TypeScript, JavaScript (ES6+), Redux, React Router, HTML5, CSS3

UI & Styling: Tailwind CSS, Material UI, Responsive design, Accessibility (a11y)

Testing & Quality: Jest, Testing Library, Vitest, WebdriverIO, Selenium, Lighthouse

Data Visualization & Maps: Chart.js, Leaflet

Media & Streaming: JW Player, Live-event interfaces, Real-time state management

AI-Assisted Development: Claude Code, GenAI workflows for planning, code review & QA

Tools & Workflow: Vite, Webpack, Git, REST APIs, JSON data modeling

Backend (working knowledge): Java / Spring Boot, ASP.NET

EXPERIENCE

Front-End Developer (Contract) | Fox Corporation

Jul 2026 — Present

Los Angeles, CA

- Build the front end of an internal Fox News product: responsive navigation, sortable data tables, global filters, interactive maps, and a streaming AI query interface.
- Connect live queries and subscription updates to the UI through reusable hooks and adapters.
- Implement enterprise SSO, protected routes, session management, and role-based access control.
- Evaluated SVG, Canvas, and WebGL rendering approaches for large-scale data visualization.
- Own features end to end — technical planning, development, testing with Jest and Testing Library, code review, and documentation.
- Set up AI-assisted workflows for planning, code review, and QA, each with a human approval gate.

Senior Front-End Developer | Squanto

Oct 2025 — Jun 2026

Los Angeles, CA (Remote)

- Sole front-end developer for [squanto.app](#), a live-entertainment marketplace connecting event hosts, performers, and audiences — owned the web UI from first build through soft launch.
- Set up the front-end architecture from scratch: React 19, React Router v7, Tailwind CSS v4 design tokens, and a typed mock-data layer.
- Built the interactive event map (react-leaflet) shared by public and signed-in pages, plus data visualizations and analytics views for live, frequently updating data.
- Designed the two-party gig-booking flow — offers, counter-offers with full history, and action-needed alerts — connected to the booking contract step.
- Shipped a PWA + Cordova mobile build from the same React codebase, plus GA4 and Meta Pixel analytics with GDPR/CCPA consent.
- Partnered with the CEO and systems architect through live debugging sessions and spec-driven development; used Claude Code to speed up documentation and test coverage.

[squanto.app](#)

React / TypeScript Developer (Contract) | Trinity Broadcasting Network

Jun 2023 — Aug 2024

Fort Worth, TX (Hybrid)

- Led React and TypeScript front-end development for the TBNPlus.com and MeritPlus.com subscription streaming platforms — sign-in and payment flows, plus the MeritPlus marketing landing page.
- Worked with backend engineers on Okta (authentication) and Stripe (payments) integrations, and tuned UI performance and reliability.
- Maintained TBN.org and related microsites on WordPress and Drupal.

tbnplus.com

Front-End Developer (Contract) | Amazon Web Services

Jul 2022 — May 2023

Seattle, WA (Remote)

- Built and maintained React, Redux, and TypeScript UI components for Amazon QuickSight, AWS's business-intelligence platform — including data visualizations such as line charts and word clouds.
- Shipped production components under strict testing standards and helped prototype new features with cross-functional teams.

Front-End Developer (Contract) | FOX

Jun 2020 — May 2022

Los Angeles, CA (Remote)

- Maintained and extended the FOX Web Player (built on JW Player), used by millions of viewers across FOX.com, FOX Sports, FOX Nation, and other FOX properties.
- Tracked down complex UI and WebView issues, including channel branding and compatibility on Xbox and Chromecast.
- Added analytics tracing and performance improvements in close coordination with the engineering team.

Front-End Developer (Contract) | ADP

Nov 2019 — May 2020

Pasadena, CA

- Built React components and pages for myWisely, ADP's direct-to-consumer debit card app, reused across the browser and a hybrid mobile webview.
- Wrote tests with Jest and Selenium WebDriver on a stack built with Material UI, Redux, and Webpack.

Front-End Developer | FOX Sports (FOX Corporation)

Mar 2012 — Aug 2019

Los Angeles, CA

- Front-end developer on FOXSports.com, a high-traffic sports platform covering the NFL, MLB, NBA, NCAA, FIFA World Cup, US Open, and the Olympics.
- Built interactive features: live scoreboards, event brackets, newsletter tools, ad integrations, and companion video players.
- Contributed front-end work to "The Vanishing Man," a Sports Emmy Award-winning long-form feature.
- Took part in several full-site redesigns and CMS migrations on a Java / Spring backend.
- Kept major live events running through performance tuning, analytics, and on-call PagerDuty coverage, including the FS1 channel launch.

[The Vanishing Man \(Sports Emmy\)](#)

UI Engineer | Medversant Technologies

May 2008 — Feb 2012

Los Angeles, CA

- Sole front-end developer on ProviderSource.com, an early SaaS platform for medical credentialing — built the full UI, including complex form-heavy workflows and internal tools for large-scale data processing.

EDUCATION

Associate of Science, Computer Network Systems | ITT Technical Institute, San Dimas, CA

Dec 2008
